

Press Release 01/20/2012: New ECEA Transponders

The ECEA has extended its' relationship with MotoTally as the Official Hare Scramble Scoring Software Provider. Since 2008 MotoTally has provided the ECEA Championship Hare Scramble Series with cutting edge software. 2012 will be no different as MotoTally has stepped up the game with new UHF Transponder tags. These new tags have been tested by the NEPG (National Enduro Circuit) in 2011 along with other choice series across the USA and Canada.

These new tags are smaller and are applied to the rider's helmet visor. Riders can expect better reads thru the scoring lanes, no longer will certain models not read. The tags are proprietary to the MotoTally Scoring Systems and are not hampered or interfered with by similar tags from other software vendors. MotoTally scoring only works with MotoTally Tags and ignores others. In the event that a rider has a MotoTally Tag from another series using MotoTally Software it must be used in ours unless you choose to remove it. Our ECEA Tags can be used in the National Enduro Events, J-Day Series, ISDE Qualiers and many other MotoTally scored Series.

If a rider runs another series with a comparable tag it may be placed in the same area of the visor as long as an inch or so spacing is kept. The neither ECEA nor MotoTally has any control over other software that may not be programmed to UHF Alien Tag specs. MotoTally and the ECEA will ensure these new tags perform properly. The limitations of the old TI cigar style or credit card style transponders are lifted allowing the UHF Tags to work nicely. These new tags like any passive transponder must not be too close or on metal, even chrome helmet paint can be an issue. The ECEA Hare Scramble Team will be in place to aide with placement of the tags.

Some other features of the software will be enhancements to Tech inspection, printing helmet labels and even a Bike number can be done at Tech.

The Rider will have a LCD Display facing them to see the sign up process, they can check the actual sign up data live as they pay for their race and verify there class and info.

The rider can also bring his helmet to sign up, have it scanned and instantly you are signed up to race, just pay and go ride.

There is more behind the scenes upgrades that will speed up all the little quirks that can delay results, we will be even faster now.

Thank You

Brian Jahelka, MotoTally & Mike Soudas, ECEA Scoring
